

Wine Inventory Management System

Whether you have 500 or 50,000 bottles of wine, the Wine Inventory Management System gives you the power and flexibility to easily manage your collection.

Designed for large private wine collections, the Wine Inventory Management System is used by owners of the finest collections in America. Its flexible design gives you the power to accurately and easily manage tens-of-thousands of bottles of wine.

Powerful Inventory Tracking

WIMS allows you to take complete control of your wine inventory by maintaining detail information on each bottle in your collection. Whether your wine is stored in one cellar or several, WIMS allows you to track bottles in an unlimited number of cellars and you instantly know where all of your wine is located. In addition, movement history is maintained showing when bottles were moved from one cellar to another or from one bin to another and why.

Each bottle in your collection is assigned a status code. Status codes are a powerful tool for managing your cellar by allowing you to assign codes that make sense to you. Have that special bottle that you want to hold and not drink until that special occasion? Assign that bottle a Hold status. In addition, audit records are kept showing you when a bottle's status changed and why.

WIMS allows complete control over bin allocation by letting you define bins within each cellar. Each bin is assigned a bottle type and maximum quantity thus providing bin capacity and refill checking.

Sophisticated Cost Tracking

Because wine is not only to be enjoyed, but a great investment, WIMS includes complete costing, vendor tracking and sale pricing. WIMS maintains complete purchase information, including date purchased along with vendor and vendor's invoice number. If you sell a bottle, the sale price is maintained allowing you to view profits (or losses) on individual bottles of wine. WIMS also maintains a complete history of appraisals. This allows you to appraise your collection at any time and see the value increase (or decrease) over time.

Buy wine on a futures basis? No problem, WIMS tracks futures purchases so you know what wine you've purchased.

Journal

WIMS has the most comprehensive note recording system of any wine software available. You can enter personal notes

about a specific bottle of wine and general comments about a particular wine. There is also a journal feature within WIMS that allows you to record thoughts about the wine and enter comments from publications.

You can 'tag' wines for quick retrieval. Do you have a special wine you want to remember for later? Simply tag that wine and later you can select wines which have been tagged.

The Power of Bar Coding

WIMS was designed from the start for bar code use. Each bottle within your collection is assigned a bottle number. When you enter a new purchase, bar code labels can be printed and placed on the bottles. This bar code number stays with the bottle for the life of the bottle. When you consume, sell, give away, or otherwise remove the bottle from your collection, you can scan the bar code label with a bar code scanner and easily update the bottle's status. In addition to individual bottles, cases are assigned unique numbers allowing you to easily update entire cases at one time.

Comprehensive Search Capability

WIMS comes complete with over 1,600 predefined producers, 62 AC/Varietal types and 48 label designations. You can search your collection using any of over 30 different fields. The search results are displayed in an easy to understand format. You choose how much detail information you want to view, from simple summary of your collection down to individual bottles.

Detailed Reports

Whether you want detailed or summary information, WIMS provides more than 20 reports that will give you the information needed to manage your collection. Vendor Invoice reports give you outstanding wine deliveries while collection detail reports give you a snapshot of your collection.
